

Good Things - Project Documentation

Project Overview

Good Things is a calm, personalized content dashboard for discovering articles, podcasts, videos, and more. It is designed to feel intentional, less overwhelming, and more personal than a typical news feed.

Core Features

- Personalized feed with curated content
- Topic filtering for Design, Technology, Culture, Science, Wellness, and Business
- Search across titles, authors, categories, and sources
- Save and unsave favorites for later
- Trending and featured content sections
- Dark mode and responsive layout
- Drag-and-drop card positioning

Technology Stack

- React 18
- Vite
- Tailwind CSS
- Redux Toolkit
- Framer Motion
- Lucide React

Project Structure

- src/App.jsx: dashboard layout and interactive views
- src/content.js: mock stories and content catalog
- src/store.js: Redux state and preferences persistence
- src/index.css: styling and design system
- src/main.jsx: app bootstrap

How It Works

The app loads a curated library of mock content, lets users filter by topic, search the collection, and save favorites. Favorites, theme preference, and selected interests are kept in browser localStorage so the experience is persistent. This is a front-end demo project, not a production backend system, but it demonstrates how a personalized content dashboard can be built.

Getting Started

1. Install dependencies: `npm install`
2. Start the app: `npm run dev`
3. Build for production: `npm run build`
4. Preview the build: `npm run preview`

Summary

Good Things is a clean, user-friendly content dashboard that combines curated discovery, saved content, and a personalized feed. It's a front-end demo project built with modern web technologies.
